

Multicolour bite indicator FISHTRON B1

(last updated 21.10.2025)

Thank you for purchasing the B1 multi-colour bite indicator. We are very pleased that you have chosen our product and we hope that you will be satisfied with it.

The indicator can be easily connected to almost any electronic bite alarm with a 2.5 mm jack output connector designed for connecting a swinger. It is used to signal a bite when fishing at night, in strong winds, or at a long distance.

Attaching the swinger under the bite alarm

- Thread the indicator onto the indicator's support screw using the indicator's plastic eyelet (1).
- Tighten the indicator with the swinger onto the stand or fork.

Connecting the indicator, setting the signal color

- Plug the indicator's jack connector (2) into the indicator's connector designed for connecting the indicator.
- Imitate a bite with the indicator; the indicator should light up. The color can be changed by turning the upper half (3) of the indicator in 8 positions.
- The following colors can be set: red, purple, green, yellow, blue, turquoise, white, or LED off (the color shade may be affected by the battery status in the indicator).

Setting the pressure, line tension

- The indicator head is equipped with a ball mechanism. The line release can be selected using the locking screw (4) to adjust the pressure of the balls.
- Add line so that it is taut, but the swinger is not too tight. The indicator's sensitivity can be adjusted using weights. Add line so that it is taut, but the indicator is not too tight. The indicator's sensitivity can be adjusted using weights (5).

Recognizing a bite

- When a fish bites, the indicator will respond by moving up or down, depending on whether the fish is pulling the line away from you or toward you.
- The indicator's quick and sensitive response will help you recognize a bite even in adverse conditions such as wind, strong currents, or long distances.

Safety and warranty:

Do not leave the indicator in your car on the dashboard or behind the windows in direct sunlight during the summer months. Do not throw the indicator into a fire or expose it to high temperatures. The device has been issued with an EU declaration of conformity. Do not dispose of unusable products in mixed municipal waste; they must be disposed of in an environmentally friendly manner in accordance with Directive 2012/19 EU. The indicator comes with a 24-month warranty. The warranty does not cover mechanical damage and defects caused by use contrary to these instructions.
